A possible protective group of the amino function is the carbobenzoxy radical (Z radical) and the tert-butoxycarbonyl radical (BOC radical) as well as the acetyl group. In the case of the

asparagyl and glutamyl radical claimed for R₁, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C₁-C₆-alkanols, e.g. as a methyl, ethyl or as a tert-butyl ester.
